

MWIMULE BIENVENU

BACKEND DEVELOPER

mwimulebienvenu05@gmail.com +250 792 748 347 <https://linkedin.com/in/itbienvenu> <https://github.com/itbienvenu>

Professional Summary:

Backend Developer specialized in building high-performance APIs and distributed systems using FastAPI and Node.js. Experienced in designing scalable architectures, optimizing database performance, and implementing event-driven systems with Redis and message queues.

Technical Skills:

Languages : Python, TypeScript, SQL, C#

Frameworks : FastAPI, Django, Node.js, Express

Database : PostgreSQL, Redis, MySQL, MongoDB, Elasticsearch

Tools : Docker, AWS(EC2, S3), CI/CD Pipelines, Git, GitOps

Architecture: RESTful APIs, Microservices, Event-Driven Architectures, Zero trust architectures.

Experience:

Jan -2026: Backend Developer, Netlyx (<https://www.netlyx.net>)

- Designed and implemented backend services supporting CI/CD pipelines for automated application deployments
- Integrated platform with **GitHub** for **seamless code-based deployments**, enabling faster developer workflows
- Built and integrated **payment systems** into the hosting dashboard for subscription and service management
- Implemented **service versioning mechanisms** to support controlled releases and backward compatibility
- Designed backend logic for **service delivery layer**, improving deployment speed and reducing latency of long-running processes
- Optimized system performance and reliability for concurrent deployment operations

Nov-2025 : Software Engineer, MT Glory co, Kigali,

- Own system architecture and design to support 10k + concurrent users with <200ms p95 latency

- Write unit/integration test and enforce $\geq 80\%$ coverage, support CI/CD with automated deployments
- Collaborating with other developers to breakdown features, estimate effort and resolve blockers in sprint planning

Jun-2025: Backend Developer, Sybella Systems, Kigali (<https://sybellasystems.co.rw>)

- Built authentication and payment synchronization services using Node.js and PostgreSQL, improving system reliability and reducing sync failures
- Implementing data pipelines and caching(Redis, RabbitMQ) to enable real-time analytics
- Ensuring security, compliance and reliability, rate limiting, audit logs, automated backups

Projects:

Transport Management System(TMS):

Overview: Microservices-based platform for transport operations including ticketing, payments, and real-time fleet tracking.

- Designed and implemented a microservices architecture with domain-driven service decomposition (auth, ticketing, payments, tracking)
- Built high-performance REST APIs using FastAPI and Node.js (TypeScript)
- Implemented event-driven communication using RabbitMQ ensuring eventual consistency across services
- Designed transaction-safe booking system using Redis distributed locking (Redlock) to prevent double booking
- Built real-time tracking system using WebSockets and Redis geospatial indexing
- Designed secure authentication and authorization using JWT, RBAC, and Zero Trust principles
- Optimized PostgreSQL queries and implemented caching strategies with Redis
- Implemented CI/CD pipelines with Docker and GitHub Actions, enabling automated testing and zero-downtime deployments

ChatTherapy Africa:

Secure tele-therapy platform enabling users to access mental health support through real-time sessions and protected communication.

- Built authentication system using JWT (jose) with HttpOnly cookies to prevent XSS and session hijacking
- Designed and implemented backend data models using MongoDB with Prisma ORM

- Built server-side features including user management, session handling, and API routes using Next.js server actions
- Integrated third-party services including Cloudinary for media storage and Nodemailer for automated email notifications
- Ensured privacy-focused design with secure data handling and protected user sessions

Certifications:

- Kubernetes and Cloud Native Essentials, The Linux Foundation
- Network Defence, CISCO
- Docker. The Linux Foundation
- Introduction to GitOps, the Linux Foundation

Education:

2024 – 2028: B.Sc. in Information Technology, University of Rwanda
